List of tables

Introduction

| | |
|--|---|
| Table A: South African population by province and population group: 1996 | 4 |
| Table B: South African households by province and population group of the household head: 1996 | 4 |
| Table C: South African population by province and population group: 2001 | 5 |
| Table D: South African households by province and population group of the household head: 2001 | 5 |

Part 1: Information on individuals

| | |
|--|----|
| 1 First home language by population group and gender | 8 |
| 2 Country of birth by population group and gender | 13 |
| 3 Citizenship by population group and gender | 16 |
| 4 Age distribution in five-year intervals by population group and gender | 19 |
| 5 Religion by population group and gender | 24 |
| 6 Marital status amongst those aged 15 years and older by population group and gender | 29 |
| 7 The disabled population by type of disability, population group and gender | 32 |
| 8 Level of education amongst those aged 20 years or more by population group and gender | 35 |
| 9 Attendance at an educational institution amongst those aged 5-24 years by population group and gender | 38 |
| 10 Labour market status of those aged 15-65 years by population group and gender | 51 |
| 11 Reasons for being not economically active amongst those aged 15-65 years by population group and gender | 55 |
| 12 Employment status amongst the economically active aged 15-65 years by population group and gender | 57 |
| 13 Labour market rates amongst those aged 15-65 years by population group and gender | 60 |
| 14 Occupation amongst the employed aged 15-65 years by population group and gender | 62 |
| 15 Economic sector amongst the employed aged 15-65 years by population group and gender | 66 |
| 16 Individual monthly income amongst the employed aged 15-65 years by population group and gender | 71 |

Note: There are four tables in each section in Parts 1 and 2. The first two show numbers and percentages respectively for 1996, and the third and fourth show numbers and percentages respectively for 2001. The exception is Section 13, which has two tables, one for 1996 and one for 2001.

The list alongside gives the generic table heading for each topic, and the page number of the first table in the set.

Part 2: Information on households

| | |
|---|----|
| 17 Type of dwelling by population group and gender of the household head | 78 |
| 18 Energy source for cooking, heating and lighting by population group and gender of the household head | 82 |
| 19 Main water supply by population group and gender of the household head | 87 |
| 20 Toilet facilities by population group and gender of the household head | 90 |
| 21 Refuse removal by population group and gender of the household head | 93 |
| 22 Telephone facilities by population group and gender of the household head | 96 |
| 23 Age distribution in five-year intervals of the household head by population group and gender | 99 |

Introduction

Contents of this publication

This series represents the first full comparative report between the results of Census '96 and Census 2001, for the country as a whole, and for each province.

This volume contains detailed tables (numbers and percentages) describing personal and household characteristics of the population of Gauteng in 1996 and 2001 by population group and gender. The exact topics covered can be seen in the contents list. A comparative graph or graphs and commentary are provided for each topic. Those topics requiring specialist analysis, such as mortality, migration and fertility, are omitted from this report.

For certain topics direct comparisons are not possible. A clear indication is given in the text where this has occurred.

At the end of this introduction are four background tables giving an overall description of the numbers and percentages of people and households in each province in each census year, by population group and gender.

Similar reports to this one are being published for each of the provinces. Users should consult the website www.statssa.gov.za for information on their availability. The national volume was published in mid-2004.

A full list of the various Census 2001 printed and electronic products can also be found on the website.

Technical notes

Adjusting for undercount

For both censuses a post-enumeration survey (PES) was undertaken to determine the degree of undercount or overcount. The numbers and percentages presented in this report have been adjusted according to the PES findings.

Adjusting the count in this way leads to the introduction of fractions. These fractions have been rounded to whole numbers. The sum of the separate numbers may therefore differ slightly from the totals given. A similar effect can be seen with the percentages, which are rounded to one decimal place, and therefore may not always sum to 100.

Population group

Statistics South Africa (Stats SA) continues to classify people by population group, in order to monitor progress in moving away from the apartheid-based discrimination of the past. However membership of a population group is now based on self-perception and self-classification, not on a legal definition.

In 2001, five options were provided on the questionnaire, Black African, Coloured, Indian or Asian, White, and Other. In 1996 the first group was described as African/Black. In this volume the 2001 terminology is used. Note that for the 1996 data, 'Other' is reported separately, whereas in 2001 responses in this category were imputed. Non-responses for population group were also handled by imputation in 2001.

Imputation

In 2001, imputation was used to allocate values for unavailable, unknown, incorrect or inconsistent responses in most categories. The editing system uses a combination of 'logical' imputation techniques and 'hot decks' (dynamic imputation). 'Undetermined' values were used only for a few variables in a few cases (such as industry and occupation).

Logical imputations, in which a consistent value is calculated or deduced from other information in the household, are usually preferred over hot deck imputations. Generally, the editing system attempts to resolve inconsistencies first by looking at other characteristics of the household (for example, a married person with an invalid response for sex would be assigned the opposite sex to their spouse). If this is unsuccessful, then a consistent value is imputed from a hot deck, which bases the imputation on nearby persons or households that share similar characteristics.

Unspecified values

Variables with unspecified values from Census '96 are excluded from the comparative graphs, but in 2001 values were imputed for these variables, and are therefore included.

Coverage

- In this volume information on households, housing and services (Section 2) is provided for people living in housing units only. Household and services information is available elsewhere for persons in collective living quarters.
- Person information (Section 1) is provided for everyone, except for Census '96 for certain topics, such as country of birth and educational achievement, as noted on the individual tables. This is because in Census '96 questions on these topics were not asked of persons in collective living quarters other than hostels.

Table headings

To avoid repetition, when the entire population is being described in any table in Section 1, the heading of the table does not generally reflect this. When a subset is being described, such as the disabled population, this is given in the heading. A quick glance at the bottom right hand corner of the numbers tables will confirm the universe.

Definitions

A publication containing all census concepts and definitions is available electronically (Report no. 03-02-26 (2001)). Nevertheless, for the convenience of readers, the main terms used in this volume are defined below.

- *Household:* A household is a group of persons who live together, and provide themselves jointly with food and/or other essentials for living, or a single person who lives alone.

Note: The definition of household for other Stats SA data collection operations includes the four-night-a-week rule, according to which a person is a member of a household if he spends on average four nights a week in that household. As Census '96 and 2001 were *a de facto* censuses, which means that people were counted where they were staying on census night, the four-night-a-week rule did not apply.

- *Housing unit:* A unit of accommodation for a household, which may consist of one structure, more than one structure, or part of a structure. Examples of each are a house, a group of rondavels, and a flat. (The types of living quarters classified as housing units can be seen in Table 17.)

- *Collective living quarters:* Living quarters where certain facilities are shared by groups of individuals or households. They include hostels, hotels and institutions.

Note: In Census '96 the terminology for the different types of living quarters was slightly different, but in this volume the current terminology is used in reference to both census years. See the section on coverage, above.

- *Economically active:* All those who are either employed or unemployed. The rest of the working-age population is classified as not economically active, which includes students, homemakers, those too ill to work and anyone not seeking work.

- *Unemployed:* According to the *official or strict definition*, the unemployed are those people within the economically active population who (a) did not work in the seven days prior to census night, (b) wanted to work and were available to start work within a week of census night, and (c) had taken active steps to look for work or to start some form of self-employment in the four weeks prior to census night. People who fulfil the first two criteria but not the third are classified as unemployed according to the expanded definition.

Note: Census 2001 figures are given for unemployment according to the official definition. This is not possible for Census '96, as the way the questions were phrased did not elicit accurate information about job-seeking behaviour. Census '96 figures are therefore considered to be according to the expanded definition.

- *Highest level of (completed) education:*

- No schooling: This category includes people who had never been to school, as well as children in pre-school, Grade 0, and Grade 1 at the time of the census. Only children who had **completed** Grade 1 fell into the next category.
- Some primary: Grades 1–6 inclusive.
- Complete primary: Grade 7

- Some secondary: Grades 8–11 inclusive
- Grade 12/ Std 10
- Higher: Grade 12 plus any tertiary qualification of at least six months' full-time study or equivalent.
- *Income:* All money received from salary, wages or own business; plus money benefits from employer, such as contributions to medical aid and pension funds; plus all money from other sources, such as additional work activities, remittances from family members living elsewhere, state pension or grant, other pensions or grants, income from investments, etc. The amount reported is the total before tax. Note: Income is generally under-reported.

Extract from the Report of the Census Sub-committee to the South African Statistics Council on Census 2001

Preliminary investigations indicate that the 2001 census probably resulted in:

- an underestimate of the number of children below age five*
- an over-estimate of the number of teenagers aged between 10 and 20
- an underestimate of the number of men relative to the number of women*
- an underestimate of the number in the white population
- higher than expected numbers aged 80 and older, in the African population
- an underestimate of the number of foreign-born, since some identified themselves incorrectly as being South African-born
- age misstatement in the range 60–74
- an overestimate of the extent of unemployment
- an underestimate of those who were employed for only a few hours per week
- an underestimate of household income
- an overestimate of the number of paternal orphans and the number of fathers missing from the household.

* This is a common feature of censuses, particularly in developing countries.

In addition:

- Scanning problems caused some births to be recorded in the wrong province. The number of cases is relatively small and should not lead to too much distortion for most purposes for which these data are used; however, it does produce obviously erroneous results in when one tries to estimate the extent of inter-provincial migration of those born since the previous census.
- The fertility data (numbers of children ever born, children surviving) are problematic.

For further details of these investigations see the full report of the *Census Sub-Committee*.

Symbols used in the tables

- 0 = less than half
 0,0% = less than 0,05%
 - = nil or not applicable

Please refer to the extract from the report of the Census Subcommittee to the SA Stats Council on Census 2001 (p.3) when reading this table.

Part 1: Information on individuals

1 Home language

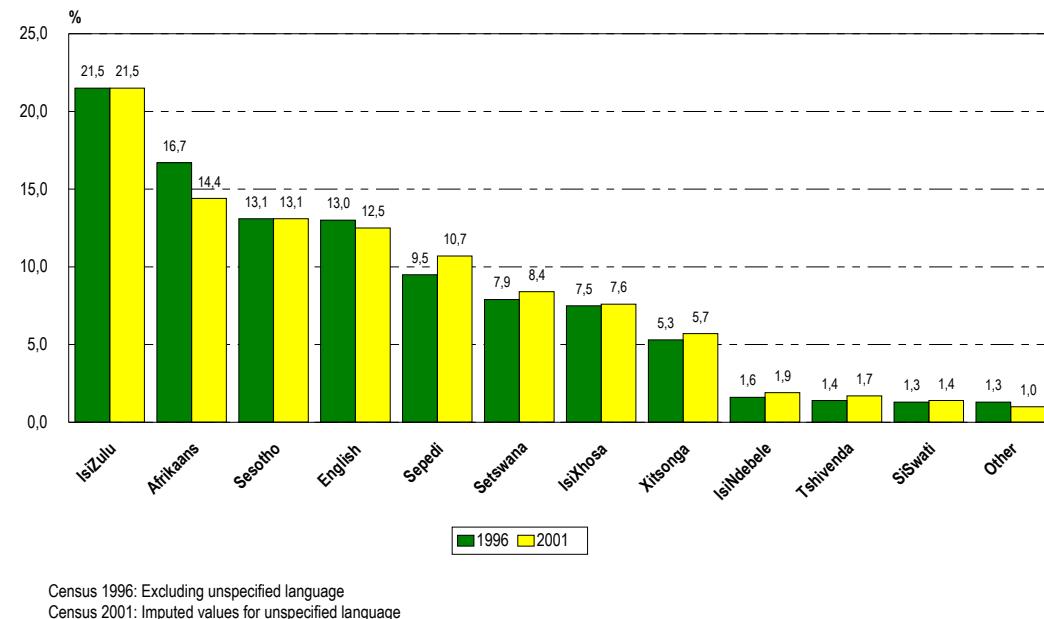

Tables 1.1 to 1.4 show the numbers and percentages of the Gauteng population speaking each of the official languages of South Africa as their first home language (language most often spoken in the household) at the time of Census '96 and Census 2001, broken down by population group and gender.

The most frequently spoken first home language in Gauteng in both census years was isiZulu. It was spoken by 1,6 million people in 1996, increasing to 1,9 million in 2001. This was followed by Afrikaans, spoken by 1,2 million in 1996, increasing to 1,3 million in 2001. The third most frequently spoken first home language was Sesotho, spoken by 953 000 in 1996, increasing to 1,2 million in 2001. The least frequently spoken first home language, of the eleven official languages of South Africa, was siSwati, spoken by only 92 000 in 1996, increasing to 123 000 in 2001.

The nine official indigenous African languages were spoken as first home languages by 70,3% of the Gauteng population at the time of Census '96, increasing to 72,1% at the time of Census 2001. Afrikaans and English together were spoken as first home languages by 29,7% of the population in 1996, decreasing to 26,9% in 2001.

Figure 1 shows the percentage of people speaking each home language in 1996 and 2001. IsiZulu was spoken by 21,5% of the population in both censuses.

2 Country of birth

Tables 2.1 to 2.4 show numbers and percentages of the Gauteng population born in South Africa and in other broad country groupings from Census '96 and 2001.

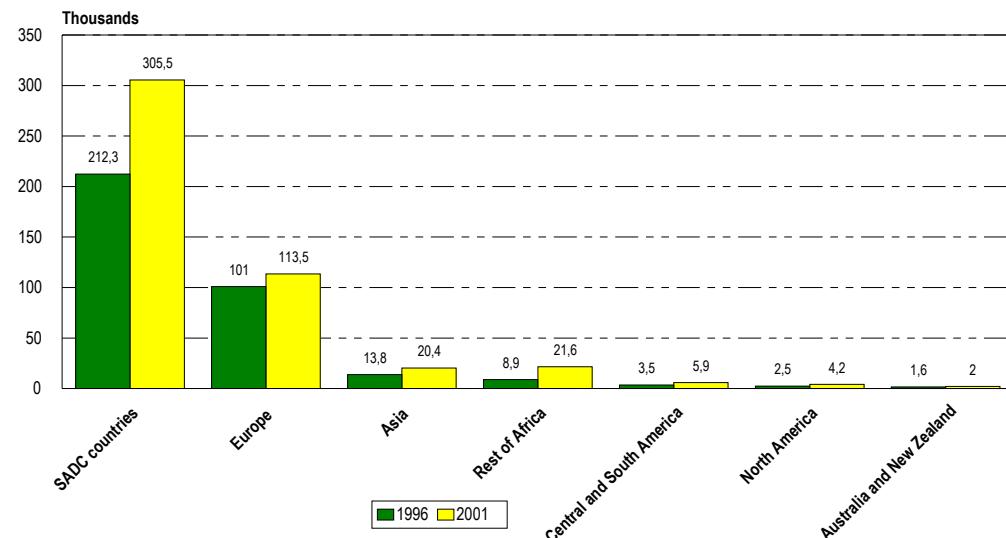

The vast majority of the Gauteng population, 94,5 in 1996 and 94,6 in 2001, reported that they were born in South Africa.

Between Census '96 and Census 2001 there was an increase of 93 000 persons who reported that they were born in a Southern African Development Community (SADC) country other than South Africa, whilst the number born in other parts of Africa increased by 13 000 (from 9 000 to 22 000) and in Europe by 12 000 (from 101 000 to 113 000).

Figure 2, which gives the data in thousands, shows that the largest increase was in persons born in other SADC countries, and the next largest in persons born in other parts of Africa.

Census '96 excludes persons in collective living quarters.

Figure 2
Country of birth of those not born in South Africa
Census 1996 and 2001: Gauteng

Census 1996: Excluding persons in collective living quarters and unspecified country of birth
Census 2001: Imputed values for unspecified country of birth

2.1 Country of birth by population group and gender (numbers): Gauteng, 1996

3 Citizenship

Tables 3.1 to 3.4 show comparisons of numbers and percentages for Gauteng between the censuses of 1996 and 2001, for broadly grouped countries of citizenship, by population group and gender.

The majority of the population, 97,4% in 1996 and 97,6% in 2001, reported that they were South African citizens. In 1996, only 4 000 said they were citizens of African countries other than the SADC countries; this number increased to 12 000 in 2001.

The number of people who said they were not South African citizens rose from 179 000 in 1996 to 209 000 in 2001.

4 Age

Tables 4.1 to 4.4 show number and percentage comparisons for Gauteng between the censuses of 1996 and 2001, for age in five-year intervals, by population group and gender.

Around a quarter of the population were children under the age of 15 years, 25,5% in 1996, decreasing to 23,6% in 2001. A relatively small percentage consisted of those aged 65 years and older (4,2% in 1996 increasing to 3,9% Census 2001).

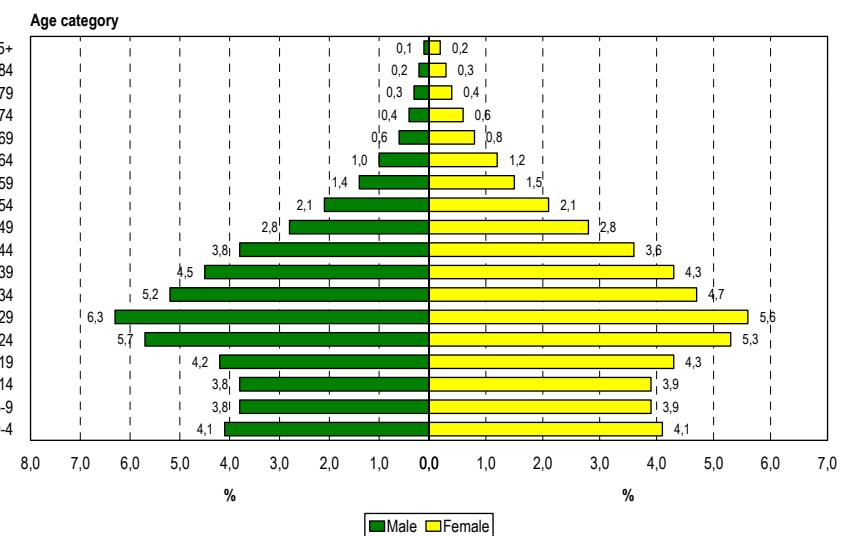

Figure 4.1
Age distribution of males and females in the total population
Census 1996: Gauteng

Figures 4.1 and 4.2 show the difference in age distribution of the Gauteng population in five-year age intervals by gender for 1996 and 2001 respectively. The Gauteng population pyramid resembles that of a developed country for both census years, with a relatively small percentage of the population being children under the age of 15 years and over half being those aged between 20 and 49 years.

Please refer to the introduction when reading this section.

Figure 4.2
Age distribution of males and females in the total population
Census 2001: Gauteng

Please note that in both graphs the percentages total 100% for the entire population, not for male and female separately as in the 1996 age pyramids previously published by Stats SA.

5 Religion

Tables 5.1 to 5.4 show number and percentage comparisons between the censuses of 1996 and 2001, for main religious groupings by population group and gender, among those living in Gauteng.

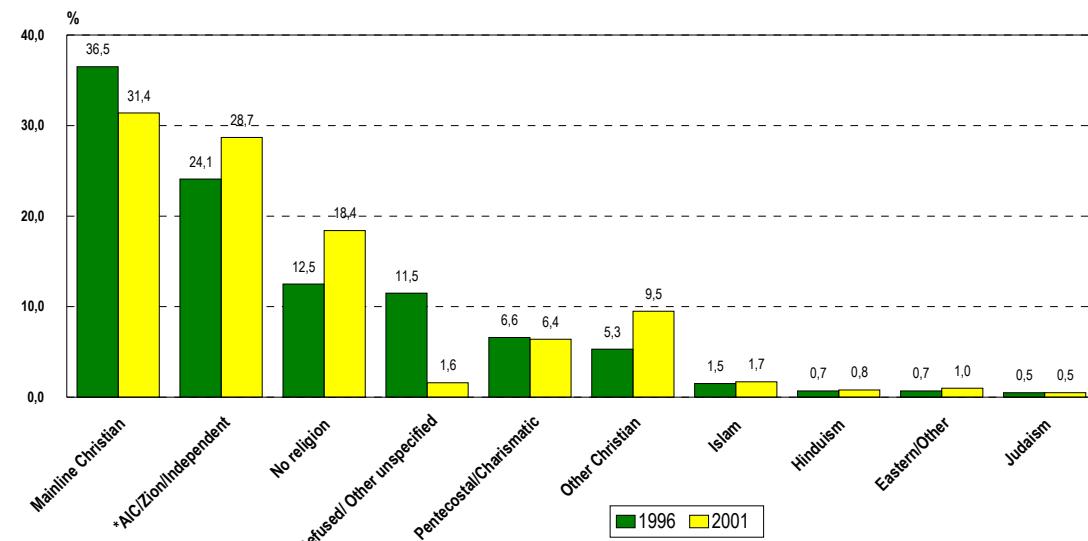

In 1996, approximately 5,2 million people were classified as belonging to a Christian religious group of one kind or another compared to 6,7 million in 2001. Approximately 897 000 persons reported having no religious affiliation in 1996, compared to 1,6 million at the time of Census 2001.

Figure 5 shows broadly defined religious affiliation. In 1996, 36,5% of the population indicated that they belonged to conventional or mainline Christian churches; this percentage had dropped to 31,4% by 2001. The mainline churches include reformed churches, Anglican, Methodist, Presbyterian, Lutheran, Roman Catholic and Orthodox churches and the United Congregational Church of South Africa.

In 2001, a further quarter of the population indicated that they belonged to one of the independent churches. This group includes Zionist churches, iBandla IamaNazaretha and Ethiopian-type churches.

Amongst those for whom the question was answered, 12,5% stated that they did not belong to any religious grouping at the time of Census '96, compared to 18,4% at the time of Census 2001.

Figure 5
Distribution of the population by religious affiliation
Census 1996 and 2001: Gauteng

* AIC = African independent churches

** Census 2001: Refused and other unspecified were imputed where possible.

6 Marital status

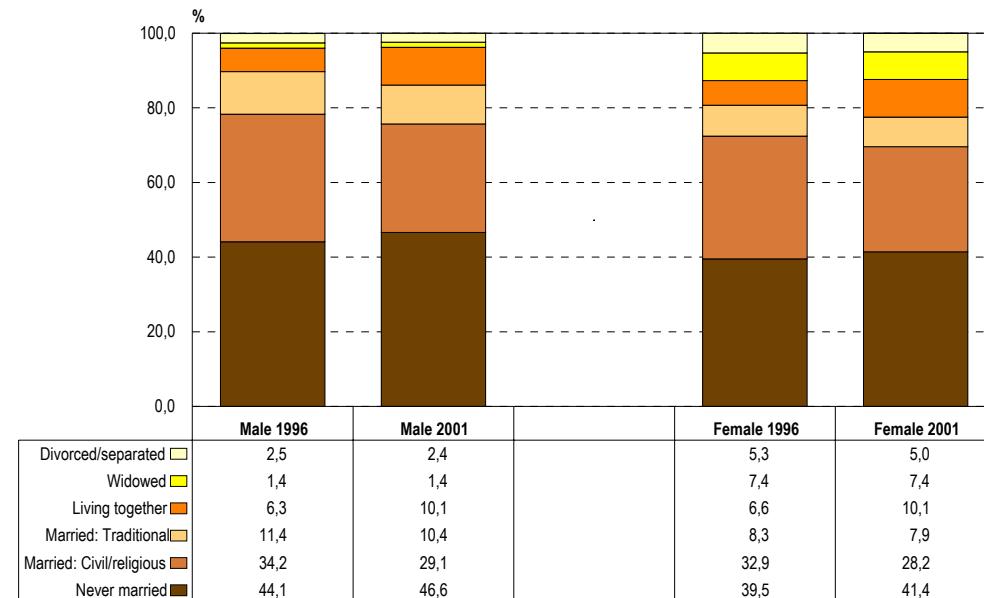

Tables 6.1 to 6.4 show number and percentage comparisons for Gauteng between the censuses of 1996 and 2001, for marital status of the population aged 15 years and older, by population group and gender.

Among persons in this age group at the time of Census '96, 2,2 million said they had never been married compared to 3 million at the time of Census 2001.

Figure 6 indicates that in 1996, 12,7% of women had a marital status of divorced, separated or widowed, as opposed to 3,9% of men. At the time of Census 2001, 12,4% of women and 3,8% of men were divorced, separated or widowed.

Note that although the legal minimum age for marriage is 16, the data given here allow for traditional marriages for 15-year-olds.

Figure 6
Marital status by gender amongst those aged 15 years and older
Census 1996 and 2001: Gauteng

Census 1996: Excluding persons in collective living quarters and unspecified marital status

Census 2001: Excluding polygamous marriages; imputed values for unspecified marital status

7 Disability

Tables 7.1 to 7.4 show the numbers and percentages of disabled people in Gauteng from Census '96 and Census 2001, by population group and gender.

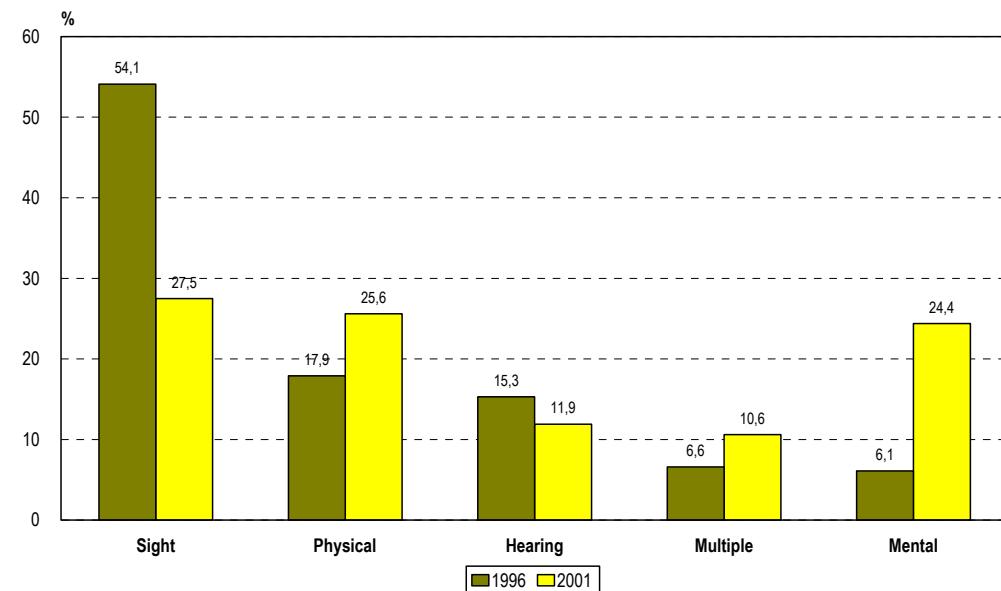

At the time of Census 2001, 332 000 persons (3,8% of the Gauteng population) were reported to be disabled. A sight disability was reported for 91 000 persons, followed by a physical disability for 85 000 persons and a hearing disability for 39 000 persons.

Figure 7 shows the percentage of the disabled population with each type of disability, except that persons with more than one disability are only captured in the last category on the graph.

The question on disability was phrased differently in Census 2001 from Census '96, with the emphasis in 2001 on whether the disability prevented the person's full participation in life activities. The questionnaire also contained a short description of what was meant by each category. The different phrasing of the question has an effect on comparisons with Census '96. Disability data from the two censuses are therefore not strictly comparable.

The effects of the difference in wording on reported disability can seen clearly in the figure.

Figure 7
Percentage of the disabled population with each type of disability
Census 1996 and 2001: Gauteng

Census 1996: Excluding people in collective living quarters and unspecified type of disability

Census 2001: Mental disability includes emotional, intellectual and communication disabilities. Imputed values for unspecified type of disability

Caution: The different phrasing of the questions in the two censuses makes comparisons difficult.

8 Level of education

Tables 8.1 to 8.4 show numbers and percentages of people in Gauteng who had reached each level of education, from Census '96 and Census 2001, amongst those aged 20 years and older, by population group and gender.

At the time of Census '96, 370 000 people in Gauteng reported that they had post-school qualifications. This had increased to 757 000 by Census 2001.

Figure 8 shows that at the time of Census '96, four in ten amongst those aged 20 years and older had started but had not completed secondary education, compared to three out of ten at the time of Census 2001.

Please refer to the extract from the report of the Census Subcommittee to the SA Stats Council on Census 2001 (p.3) when reading this table.

9 Attendance at an educational institution

Tables 9.1 to 9.4 show numbers and percentages of people in Gauteng attending an educational institution amongst those aged 5 to 24 years, by population group and gender. The information is given for each single-year age category.

A larger number of young children were attending an educational institution in 2001 than in 1996. In the age category 5 to 9 years, there was an increase of 158 000 schoolchildren in Gauteng between 1996 and 2001.

Figure 9 shows comparisons between censuses 1996 and 2001. Up to the age of 9 years there was an increase between 1996 and 2001 in the proportion attending an educational institution, but from age 10 years and older the proportion decreased.

Figure 9
**Percentage of the population aged 5-24 attending an educational institution
 in single-year age categories**
Census 1996 and 2001: Gauteng

Census 1996: Excluding unspecified age
 Census 2001: Imputed values for unspecified age

9.1 Attendance at an educational institution amongst those aged 5-24 years by population group and gender (numbers): Gauteng, 1996

Please refer to the extract from the report of the Census Subcommittee to the SA Stats Council on Census 2001 (p.3) when reading this table.

10 The labour market

Tables 10.1 to 10.4 show numbers and percentages for the census of 1996 and 2001, of persons aged 15 to 65 years in Gauteng, according to their labour market status.

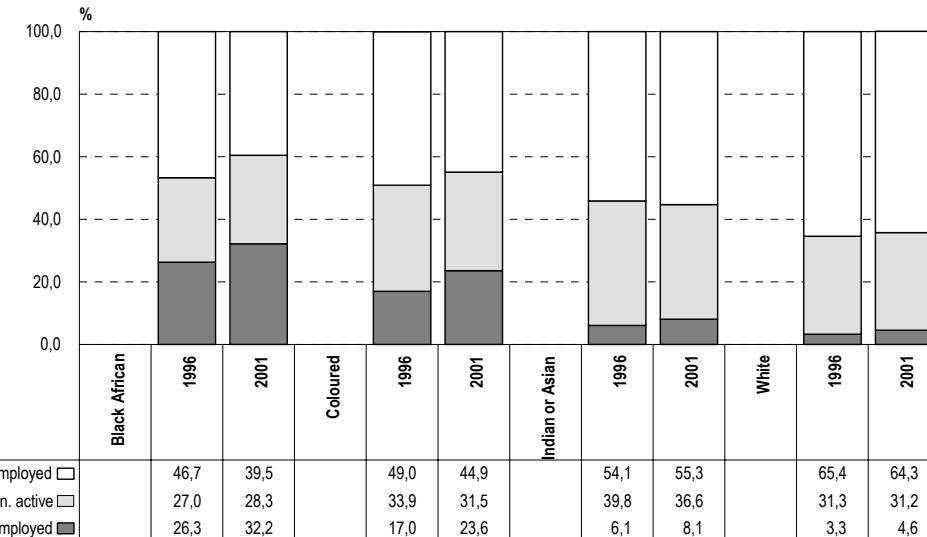

In 1996, there were 5,0 million people in the age category 15 to 65 years in Gauteng. Of these, 2,6 million were employed, 1,0 million were unemployed and 1,4 million were not economically active. At the time of Census 2001, there were 6,4 million people aged 15 to 65 years. Of these, 2,9 million were employed, 1,7 million were unemployed and 1,9 million were not economically active. The latter includes students, homemakers, the disabled, those too ill to work and anyone not seeking work.

Figure 10 shows comparative data for the two censuses. Of those aged 15–65 in Gauteng in both census years, the African and coloured population groups had higher proportions of the unemployed than the other population groups.

It should be noted that Census 2001 most probably underestimated employment (particularly in the informal and subsistence agricultural sector), and these data be used with caution. For official labour market statistics, the reader is advised to refer to the findings of Stats SA's biannual labour force survey, where more probing questions on employment and unemployment are asked.

Moreover the labour market questions were phrased differently in the two censuses. For example, in 1996 no questions were asked on job-seeking behaviour, so the 1996 figures reflect unemployment according to the expanded definition (see the introduction). The comparisons should therefore be regarded as showing trends rather than actual numbers or percentages.

Figure 10
Distribution of the population aged 15-65 by labour market status and population group
Census 1996 and 2001: Gauteng

*1996: equivalent of the expanded definition; 2001: official or strict definition. Comparisons are therefore difficult.

Census 1996: Excluding persons in collective living quarters and unspecified labour market status

Census 2001: Imputed values for unspecified work status

11 The not economically active

Tables 11.1 to 11.4 show numbers and percentages of the working-age population of Gauteng by labour market status, with additional details regarding the not economically active.

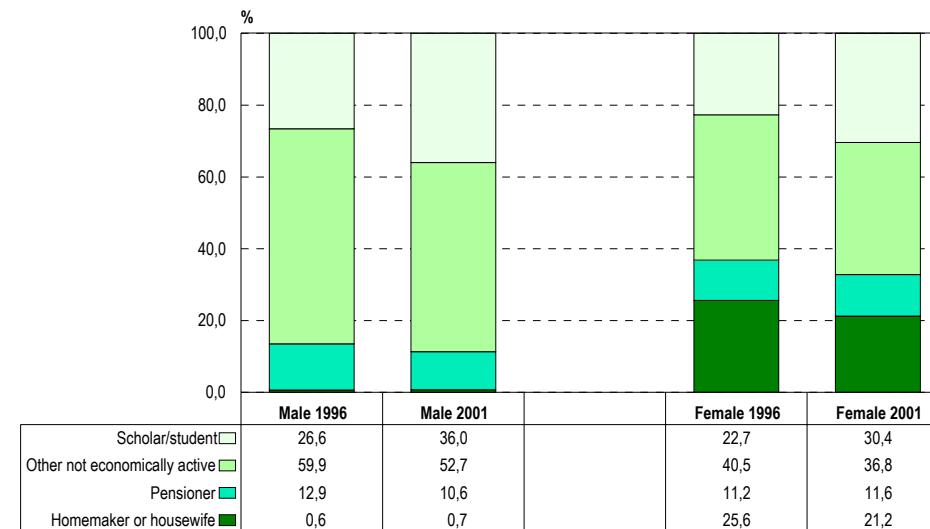

In 1996, among the 1,4 million people in Gauteng who were not economically active, 688 000 were scholars, students or children not studying, 224 000 were full-time homemakers or housewives and 169 000 were pensioners or retired persons. At the time of Census 2001, of the 1,9 million people who were not economically active, 814 000 were scholars or students*, 239 000 were full-time homemakers or housewives and 210 000 were pensioners or retired persons.

Figure 11 shows that in 1996, 26,6% of the men and 22,7% of the women who were not in the labour market were students or scholars. At the time of Census 2001 these proportions increased to 52,7% and 36,8% respectively. Extremely small proportions of men were engaged in full-time housekeeping, in both censuses.

Please refer to cautions in Section 10 above when reading this section.

* 'Child not scholar' was not an option in 2001 and any such children would have been captured under 'Does not choose to work'.

Figure 11
Reasons for being classified as not economically active amongst men and women aged 15-65 years
Census 1996 and 2001: Gauteng

Census 1996: Excluding persons in collective living quarters and unspecified reason for not being economically active

Census 2001: Imputed values for unspecified reason for not being economically active

Caution: The different definitions of unemployment used for 1996 and 2001 also affect these data, so comparisons between the two years are difficult.

12 Full-time and part-time work

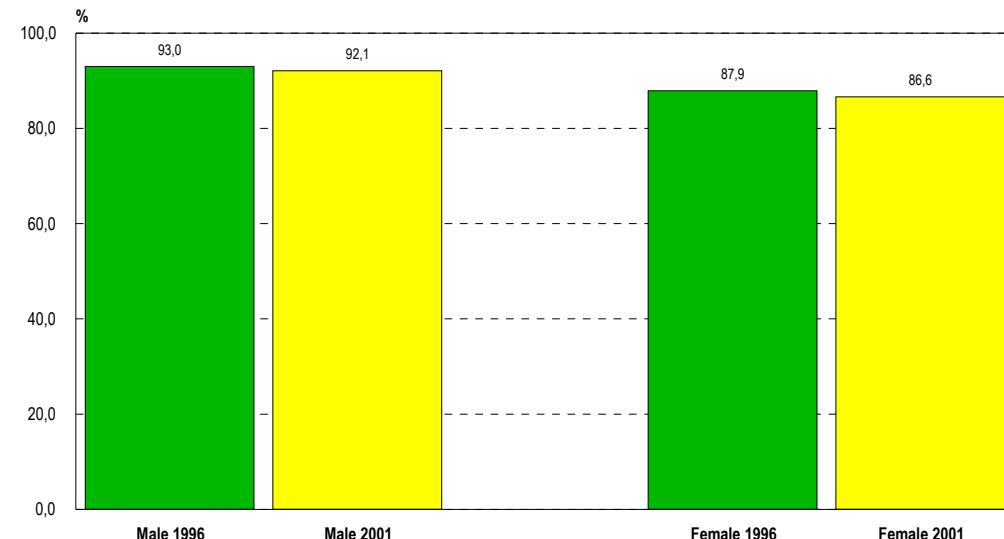

Tables 12.1 to 12.4 describe the economically active population of Gauteng, with details of whether the employed were working full-time or part-time.

In 1996, 222 000 people in Gauteng were working part-time and 2,3 million were working full-time, while 88 000 did not provide this information. At the time of Census 2001, 292 000 people were working part-time and 2,6 million were working full-time.

Figure 12 shows that at the time of Census '96, 93,0% of employed men and 87,9% of employed women worked full-time. In Census 2001, on the other hand, 92,1% of employed men and 86,6% of employed women worked full-time. A slightly larger percentage of men than women worked full-time in both census years.

The reader is reminded that the numbers and percentages of unemployed given in the tables are not strictly comparable, for the reasons given in Section 10 above.

Figure 12

13 Labour market rates

Tables 13.1 to 13.2 show the labour absorption rates, labour participation rates and unemployment rates for Gauteng for 1996 and 2001, based on the data shown in the preceding sections.

The labour participation rate is the proportion of the working-age population that is economically active. It is measured as the sum of the employed and the unemployed as a percentage of the total working-age population. The labour absorption rate is the proportion of the working-age population that is employed.

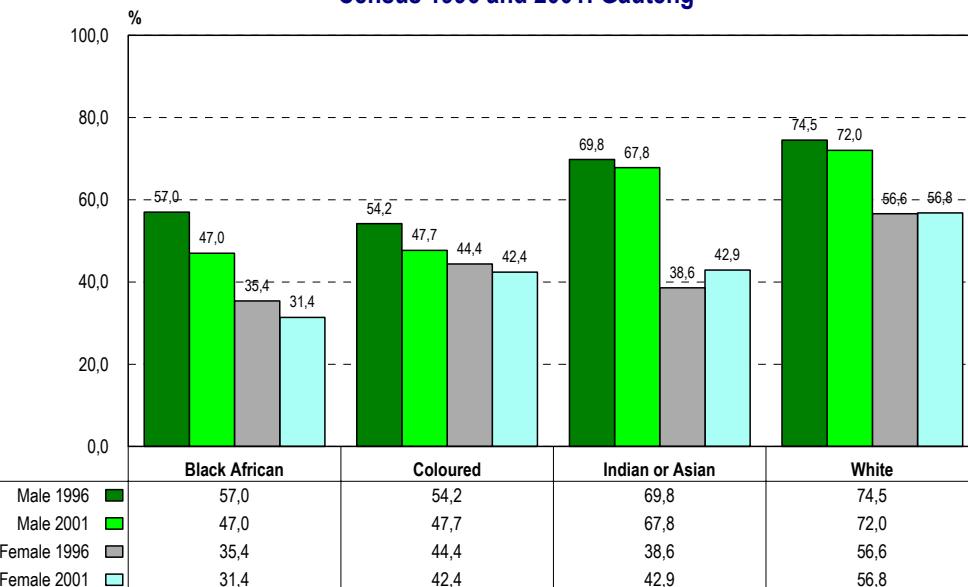

The tables show that in 1996 the labour participation rate in Gauteng was 71,5% (2,6 million employed, 1,0 million unemployed and 1,4 million not economically active). In 2001, the labour participation rate was very little different at 70,8% (2,9 million employed, 1,7 million unemployed and 1,9 million not economically active).

However the labour absorption rate dropped from 51,3% in 1996 to 45,0% in 2001. There was a corresponding rise in unemployment, from 28,2% in 1996 to 36,4% in 2001.

Figure 13 shows that in both census years the labour absorption rate was highest among white men (74,5% in 1996 and 72,0% in 2001) and lowest among African women (35,4% in 1996 and 31,4% in 2001).

The reader is reminded that the figures for 2001 may underestimate employment. The definitional differences explained in Section 10 above should also be borne in mind.

14 Occupation of the employed

Tables 14.1 to 14.4 show numbers and percentages of the employed aged 15 to 65 years in Gauteng by occupation, population group and gender, in Census '96 and 2001.

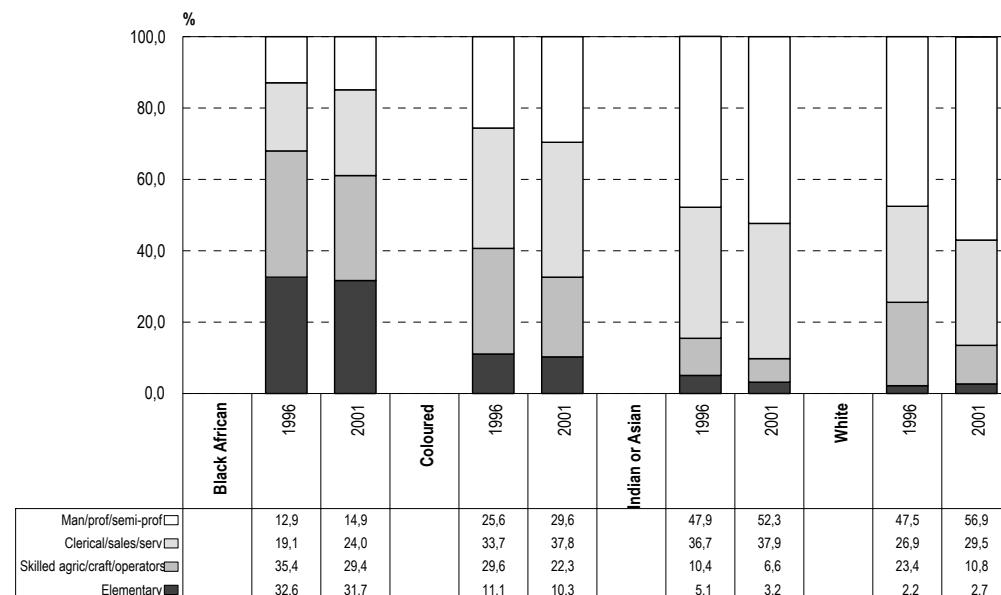

In 1996, 640 000 people in Gauteng were employed in the group comprising skilled agricultural workers, craft workers and plant and machine operators, 572 000 in managerial, professional or technical occupations and 498 000 elementary occupations. In 2001, the number of those employed in the group comprising skilled agricultural workers, craft workers and plant and machine operators decreased slightly, while the other two categories showed increases.

Figure 14 shows the distribution of the employed population in both censuses by population group and the four broad occupational categories.

At the time of Census '96, the largest group among African workers (35,4%) was employed in the group comprising skilled agricultural workers, craft workers and machine operators, while only 10,4% of the Indian/Asian working population fell into this category. The largest group of white workers (47,5%) fell into the managerial, professional and technical group, while only 12,9% of African workers fell into that group.

By 2001, the largest group among African workers was in elementary occupations, while the percentage of white workers in the managerial, professional and technical group had increased to 56,9%.

15 Economic sector of the employed

Tables 15.1 to 15.4 show numbers and percentages of the employed aged 15 to 65 years in Gauteng by economic sector, population group and gender, in Census '96 and 2001.

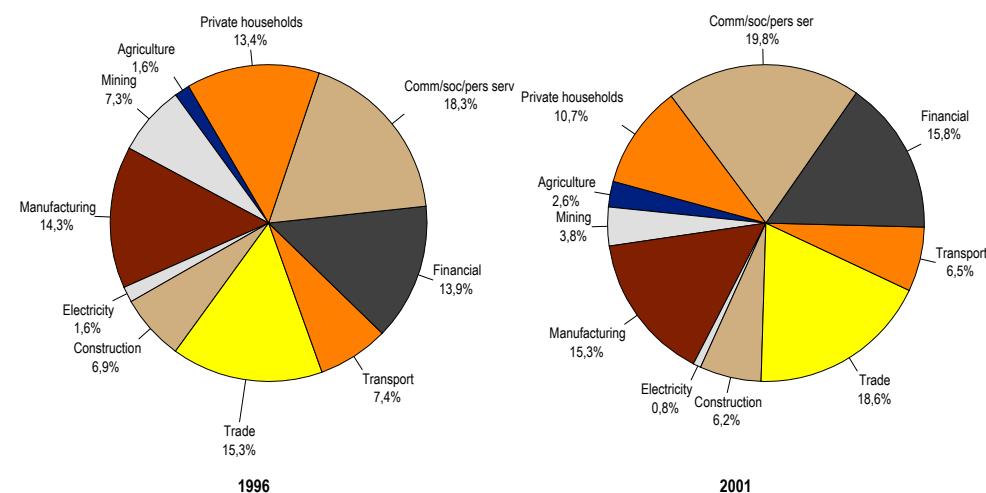

In both censuses, the four main sectors in which the employed population of Gauteng worked were community, social and personal services, wholesale and retail trade; manufacturing; and financial, insurance, real estate and business services. In 1996, 421 000 people were working in community services, 352 000 in trade, 328 000 in manufacturing and 319 000 in financial services. At the time of Census 2001, the numbers working in community services had increased to 516 000, those in trade to 485 000, those in manufacturing to 399 000 and those in financial services to 413 000. The latter possibly reflects an underestimate of trade in the informal sector.

Figure 15 shows the proportions of the employed working in each economic sector for both census years. In 1996, persons working in the four major sectors described above represented 61,8% of the employed population; this number increased to 69,5% of the employed population by 2001.

Please note: The South African Police Service, Correctional Services and the South African National Defence Force are included with government employees in the community, social and personal services category.

Readers are again referred to the notes in Section 10 above.

Figure 15
Distribution of the employed aged 15-65 by economic sector
Census 1996 and 2001: Gauteng

Census 1996: Excluding people in collective living quarters, unspecified industry and industries which could not be classified
Census 2001: Excluding unspecified industry and industries which could not be classified

Please refer to the extract from the report of the Census Subcommittee to the SA Stats Council on Census 2001 (p.3) when reading this table.

16 Income, before tax, of the employed

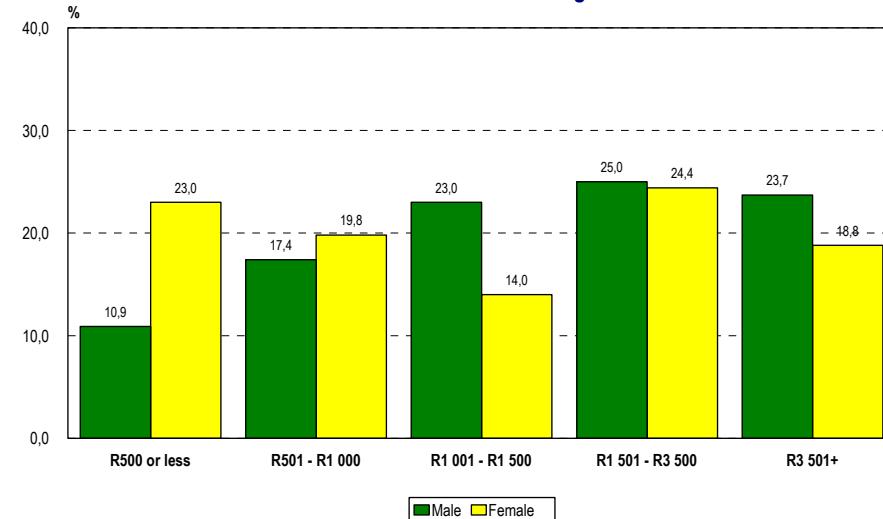

Tables 16.1 to 16.4 show numbers and percentages of the employed in Gauteng in the different monthly income brackets in 1996 and 2001.

The monthly income data for 1996 and 2001 are not easily comparable. The income categories used in each census year are different, the categories have not been adjusted for inflation, and the question on additional money from sources other than employment was not included in 2001. The definition of income and the enumerators' instructions stipulated that income was to include all sources, but it is possible that this was overlooked.

In 1996, 825 000 employed people in Gauteng earned an income of R1 000 or less per month before tax, 1,2 million earned between R1 001 and R4 500, 299 000 earned between R4 501 and R11 000, and as few as 81 000 earned R11 001 or more.

Figure 16.1

**Distribution of the employed aged 15-65 by monthly income
Census 1996: Gauteng**

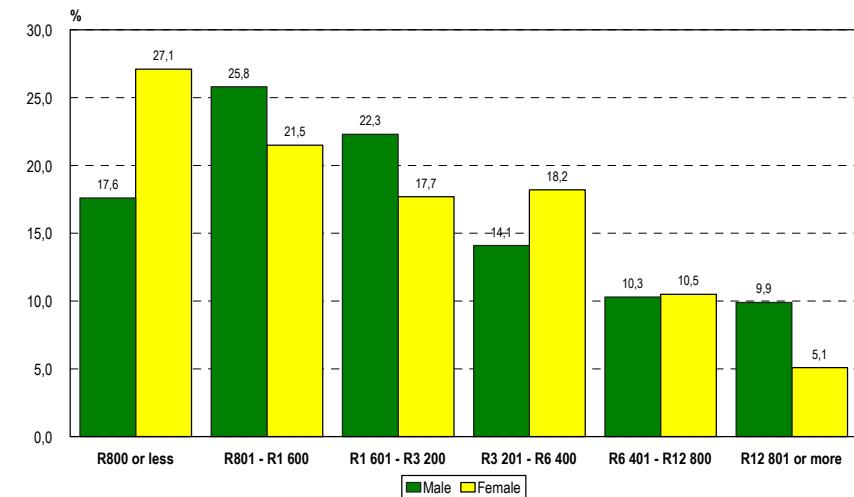

) Excluding people in collective living quarters and unspecified income

In 2001, 620 000 employed people earned an income of R800 or less per month before tax, 1,3 million earned between R801 and R3 200, 758 000 earned between R3 201 and R12 800, and as few as 229 000 earned R12 801 or more per month.

Figures 16.1 and 16.2 show clearly that a greater percentage of women fell into the lowest income category in both census years, and greater proportions of men into the two upper categories. However, the proportions of men and women in the lowest income category were smaller than the national proportions in both census years, unlike the patterns seen in rural provinces.

Part 2: Information on households

17 Type of dwelling

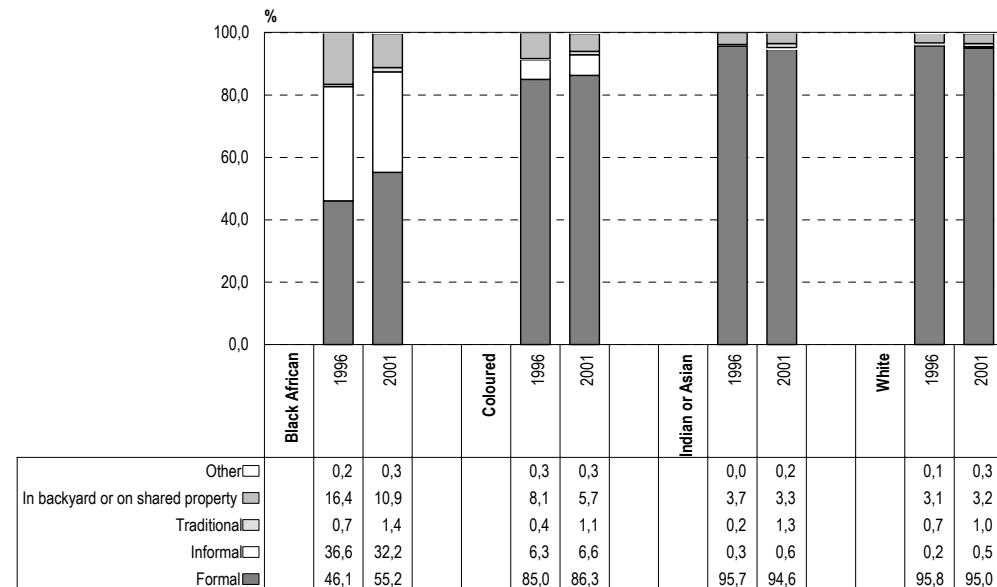

Tables 17.1 to 17.4 show numbers and percentages of Gauteng households living in each type of dwelling, by population group and gender of the household head, in censuses 1996 and 2001.

In 1996, of 2,0 million households in Gauteng living in housing units, 1,2 million lived in formal* housing, while 14 000 lived in traditional dwellings and 468 000 lived in informal housing (shacks). In 2001, of 2,7 million households, 1,7 million lived in formal housing, while 35 000 lived in traditional dwellings and 634 000 lived in shacks.

In Figure 17, it can be seen that the proportion of African-headed households living in formal dwellings increased from 46,1% in 1996 to 55,2% in 2001.

* Houses on a separate stand or yard, flats, and townhouses (and in 1996 units in a retirement village) are grouped here as formal. The other groupings are traditional dwellings; informal dwellings (shacks in backyards or in informal settlements); and other accommodation in a backyard or on a shared property.

18 Energy

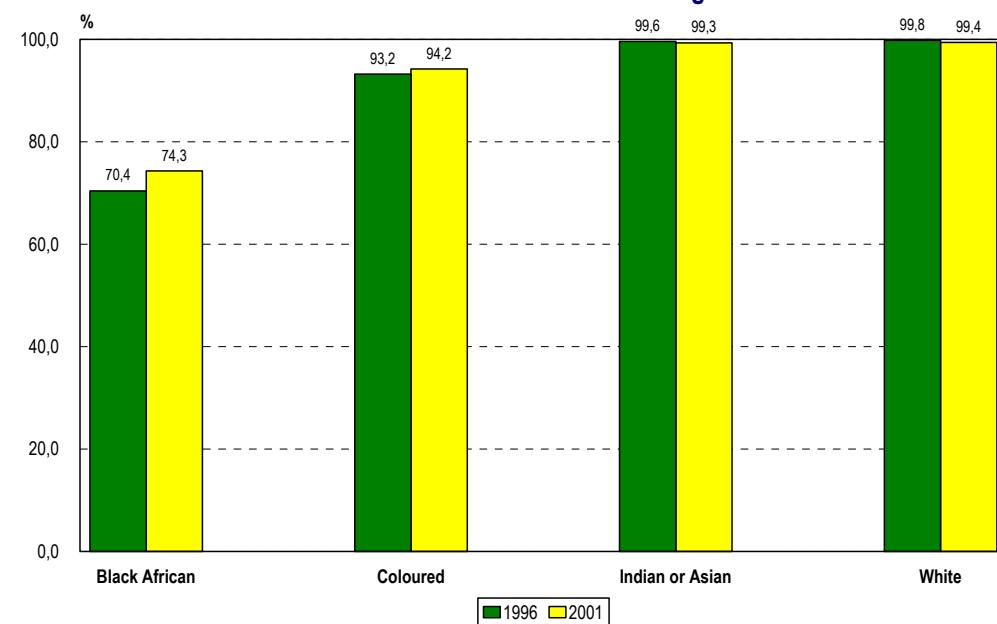

Tables 18.1 to 18.4 show numbers and percentages of Gauteng households using each energy source by population group and gender of the household head, in censuses 1996 and 2001.

In 1996, of the 1,3 million households in Gauteng headed by Africans, 896 000 used electricity for lighting, 326 000 used candles and 47 000 used paraffin. In 2001, of 1,9 million households headed by Africans, 1,4 million households used electricity for lighting, 416 000 used candles and 75 000 used paraffin.

By Census 2001, the proportion of households using electricity for lighting had increased by 1,2%. The percentages of households using electricity for cooking and heating had also increased, but by smaller margins.

Figure 18 focuses on energy used for lighting. It indicates that in 2001, 3,9% more households headed by Africans used electricity for lighting than in 1996. Households headed by coloured persons showed an increase of one percentage point in this regard.

Figure 18

Excluding collective living quarters

Please refer to the extract from the report of the Census Subcommittee to the SA Stats Council on Census 2001 (p.3) when reading this table.

19 Water

Tables 19.1 to 19.4 show the main source of water used by Gauteng households in 1996 and 2001.

At the time of Census '96, of 2,0 million households in Gauteng, only 1,9 million households (96%) had access to piped water. In 2001, of 2,7 million households, 2,6 million (97,8%) had access to piped water.

The data for main water source are not strictly comparable as the phrasing of the water questions was different in the two censuses, as well as the order in which the options were presented. However Census 2001 did collect information on the distance from the dwelling to the public tap, where used, which is useful for monitoring the level of service provided.

Figure 19
Distribution of households by main source of water
and population group of the household head
Census 1996 and 2001: Gauteng

Census 1996: Excluding collective living quarters and unspecified main water source

Census 2001: Excluding collective living quarters. Imputed values for unspecified main water source

20 Sanitation

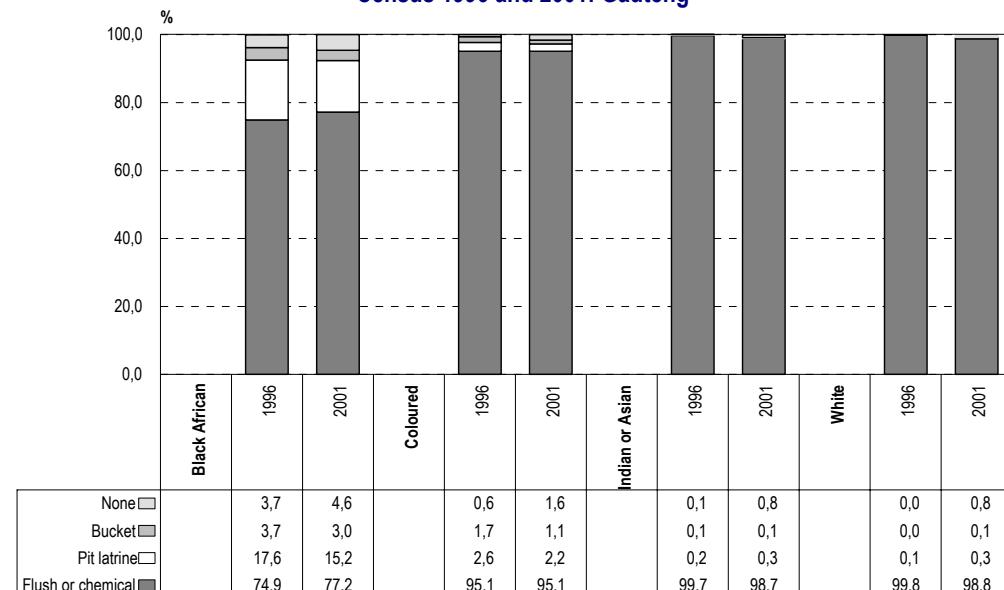

Tables 20.1 to 20.4 show numbers and percentages of Gauteng households with the various types of toilet facility, by population group and gender of the household head, in the censuses of 1996 and 2001.

In 1996, of the 2,0 million households in Gauteng, 1,6 million used flush or chemical toilets and 228 000 used pit latrines. In 2001, of 2,7 million households, 2,2 million had access to flush or chemical toilets and 299 000 used pit latrines.

It can be seen in Figure 20 that for African-headed households, access to a flush or chemical toilet increased from 74,9% to 77,2% over the five-year period, with a corresponding decrease in the use of pit latrine or the bucket system. However the proportion of African-headed households with no toilet facility increased very slightly.

Census 2001 distinguished between ventilated pit latrines (VIP) and other pit latrines. This distinction is important as a VIP is regarded as meeting minimum health standards. Please note that the comparative graph does not include this distinction, but details are provided in the tables.

21 Refuse removal

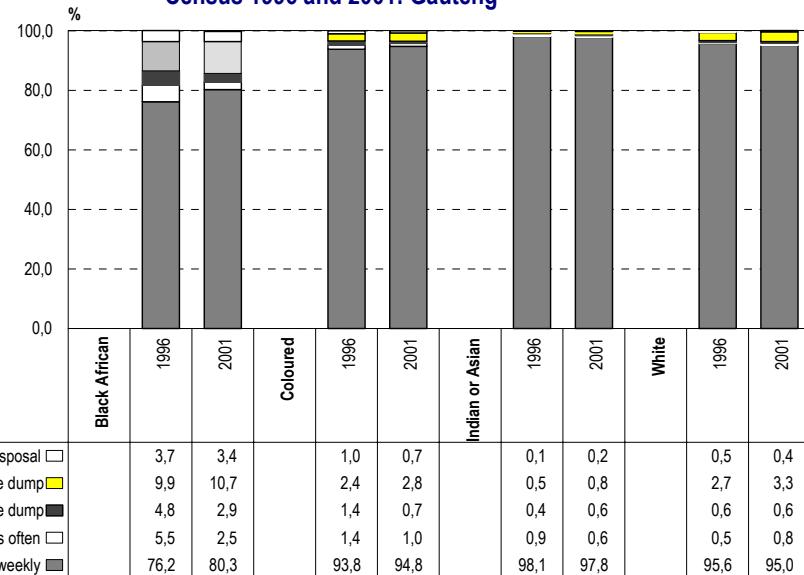

Tables 21.1 to 21.4 show numbers and percentages of Gauteng households with each type of refuse removal, by population group and gender of the household head, in the censuses of 1996 and 2001.

At the time of Census '96, of the 2 million households in Gauteng, 1,6 million had a regular refuse removal service, 207 000 used their own or a communal refuse dump and 50 000 had no method of refuse disposal. In 2001, of 2,7 million households, 2,2 million had a regular refuse removal service, 291 000 households used their own or a communal refuse dump and 69 000 had no method of refuse disposal.

It can be seen in Figure 21 that for African-headed households, the proportion with a refuse removal service at least weekly increased from 76,2% in 1996 to 80,3% in 2001.

For Gauteng as a whole, 81,4% of all households had a regular refuse removal service in 1996. At the time of Census 2001, 84,2% of all households had such a service.

Please refer to the extract from the report of the Census Subcommittee to the SA Stats Council on Census 2001 (p.3) when reading this table.

22 Telephones

Tables 22.1 to 22.4 show numbers and percentages of Gauteng households with various levels of access to telephone facilities, by population group and gender of the household head, in the censuses of 1996 and 2001.

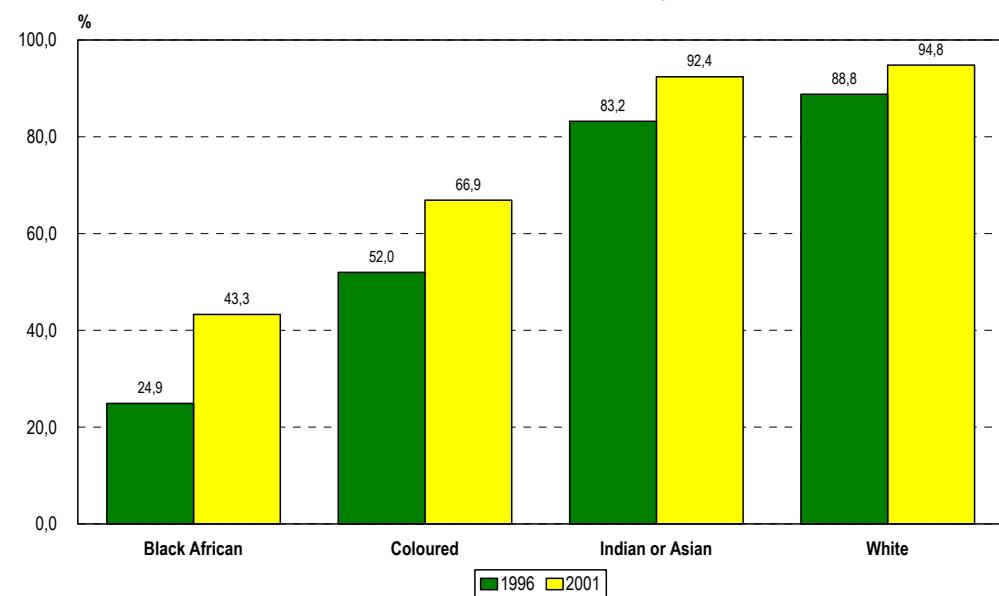

In 1996, of 2 million households in Gauteng, 890 000 had a telephone in the dwelling or a cellular telephone, 982 000 had access to a telephone at a neighbour or other location, and 77 000 households had no access to a telephone. At the time of Census 2001, access to a telephone had increased considerably. Of 2,7 million households, 1,5 million households had a telephone in the dwelling or a cellular telephone, and 1,1 million had access to a telephone at a neighbour or other location. The number of households with no access to a telephone had dropped to 43 000.

Figure 22 shows that the proportion of African-headed households with a telephone in the dwelling or a cellular phone increased from 24,9% in 1996 to 43,3% in 2001, with progressively smaller increases for coloured-, Indian/Asian- and white-headed households.

For Gauteng as a whole, in 1996 45,3% of all households had a telephone in the dwelling or cellular phone. By 2001, this had increased to 56,1%.

Note that while the 1996 census did not distinguish between landlines and cellular phones, this distinction was captured in 2001.

23 Age distribution of household heads

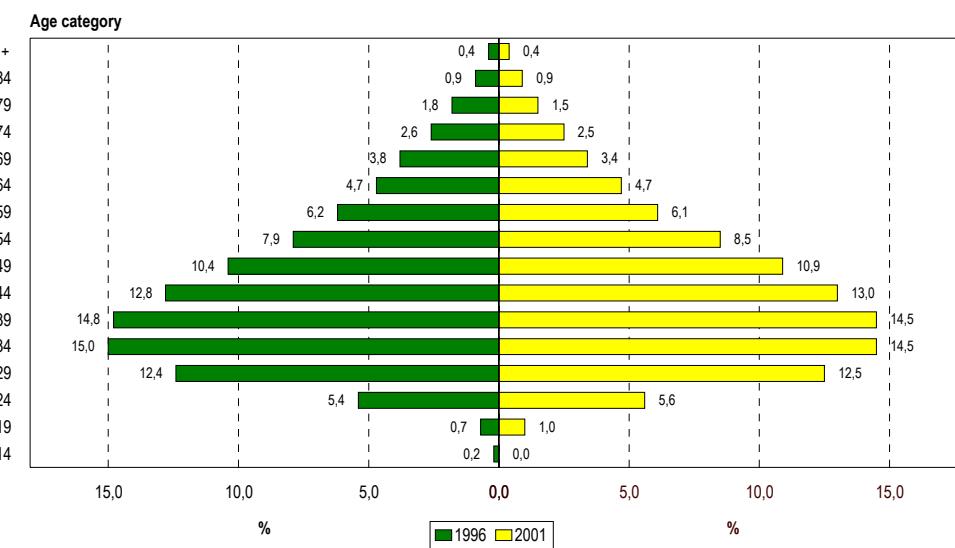

Tables 23.1 to 23.4 show the age distribution of household heads for Gauteng in numbers and percentages, by population group and gender, for the censuses of 1996 and 2001.

In 1996, 1,3 million household heads in Gauteng were in the age category 25 to 49 years, 17 000 in the age group 19 years and younger (down to 10 years old), 438 000 in the age category 50 to 69 years and 110 000 in the age group 70 years and older. In 2001, of 2,7 million households, 1,9 million household heads were in the age category 25 to 49 years, 28 000 in the age group 10 to 19 years, 601 000 in the age category 50 to 69 years and 141 000 in the age group 70 years and older.

Child household heads younger than 10 years were also captured in 2001. The numbers and percentages are fractional and have not been included here. However, it should be noted that for this reason the total households in the 2001 tables for this variable are slightly lower than the usual totals.

Figure 23 shows that in both censuses 65,4% of all household heads were in the age group 25 to 49 years. The overall pattern is very similar to the national pattern.
